Biosketch

Electronic Engineer. He is Head of the Applied Technologies Research Area of IRCCS Medea. His role includes technical supervision and coordination of his multidisciplinary team made up by engineers, psychologists and physiotherapists. He is involved in the development and testing of new technical solutions mainly for clinical, pedagogical and psychological applications. He has experience in the study of human-machine interfaces and expertise in database development. He has been involved as principal investigator or unit team leader in many research projects granted by the Italian Ministry of Health, European Commission and private foundations. He was the technical architect of the EUROMAC registry. He authored and coauthored many publications and patents. He was consultant at a Patent and Trademark Office and at the local Court.
